## Activity 1: Overall incidence rate by country *and* age group

- Calculate the incidence rates by age group for one of the four pairs of countries assigned to your team:
  - UK and Viet Nam
  - Austria and China
  - Georgia and Philippines
  - Singapore and Ethiopia
- Plot the data in a bar chart. Add a title and a  $y$ -axis label to the plot. Add the corresponding age group as a label below each bar.
- When you're finished with both countries, share your results with the class as indicated by your prof so that we can compare different countries.
